

Use-Case Flow Specification

Problem Statement #55 : Book Club Reading Challenge & Discussion Portal

Use Case:	Cast Vote in Monthly Poll
ID:	UC-08 (implements FR-005; includes UC-09 Verify Duplicate Vote, which supports NFR-001)
Primary Actor:	Club Member
Secondary Actor:	System (session/vote-log verification)

Preconditions

- The Club Member has an authenticated, active session on the portal.
- A monthly poll for the next book selection is currently open (the current time is before the published voting deadline).
- The poll lists at least two candidate books.

Postconditions

Success: Exactly one vote is recorded for the Club Member against their selected candidate book, and the poll's live tally reflects the new vote.

Failure: No additional vote is recorded; the member's original vote (if any already exists) remains unchanged and the tally is unaffected.

Main Success Scenario

1. Club Member navigates to the “Monthly Poll” section and opens the currently open poll.
2. System displays the list of candidate books along with the voting deadline.
3. Club Member selects one candidate book as their choice.
4. Club Member confirms the vote submission.
5. System executes «include» Verify Duplicate Vote: it checks the member's account/session against the poll's vote log to confirm they have not already voted in this poll.
6. System confirms the member has not previously voted in this poll.
7. System records the vote, links it to the member's account for duplicate-prevention, and increments the tally for the selected book.
8. System updates the live results/tally in real time.
9. System displays a confirmation message to the Club Member (“Your vote has been recorded”).
10. Use case ends successfully.
