

Requirements Table – Problem Statement #55

Book Club Reading Challenge & Discussion Portal

Actors: Club Member, Discussion Lead, System Administrator

Functional Requirements (FR-001 to FR-005)

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall hide content inside spoiler-tagged discussion comments until the user explicitly clicks to reveal it or marks that chapter as read.	High	Pass: spoiler text is blurred and stays hidden even in the preview/search results. Fail: spoiler text shows up anywhere before the user clicks reveal.	This was the example given for the problem statement, and it's basically the main point of the discussion feature (no spoilers).
FR-002	Functional	The system shall let a Club Member set a personal reading goal (in pages) for the book the club is currently reading, and edit it later if needed.	High	Pass: member enters a goal, e.g. 300 pages, and it's still there correctly next time they log in. Fail: goal doesn't save or shows the wrong number.	This is pretty much the “reading challenge” part of the app that the problem statement talks about.
FR-003	Functional	The system shall let a Club Member log how many pages/chapters they've read, and show their progress as a percentage of their goal.	Medium	Pass: goal is 300 pages, member logs 90 read, progress shows 30%. Fail: percentage is wrong or doesn't update after logging pages.	Without this, the reading goal from FR-002 doesn't really do anything — members need to actually see how far along they are.
FR-004	Functional	The system shall let a Discussion Lead create a monthly poll with at least 2 candidate books and a deadline, and it should be visible to all members once posted.	High	Pass: poll with 2+ books and a deadline appears on every member's dashboard right after posting. Fail: poll has under 2 books, no deadline, or members can't see it.	This is how the club actually decides the next book, which is one of the main things mentioned in the problem statement.
FR-005	Functional	The system shall only allow a member to vote once per monthly poll. A second attempt should be rejected.	High	Pass: second vote attempt gets an error like “you already voted” and the tally stays the same. Fail: the system lets the member vote more than once.	If members could vote multiple times the poll wouldn't really be fair, so this needs to be blocked.

Non-Functional Requirements (NFR-001 & NFR-002)

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
NFR-001	Performance & Security	Monthly poll voting results must prevent duplicate votes using user session verification and update tallies in real-time.	High	Pass: benchmarking tests confirm the tally updates quickly and no duplicate votes get through, even when a lot of members vote around the same time. Fail: a duplicate vote is accepted or the tally takes noticeably long to update.	Given requirement. Since basically everyone votes in the same short window every month, the system needs to handle that load and still keep results fair.
NFR-002	Availability	The portal shall be accessible almost all the time (aiming for around 99% uptime a month) and should not lose any reading logs or discussion comments if the server restarts.	Medium	Pass: uptime over a month stays around 99% or higher, and after a restart none of the previously saved logs/ comments are missing. Fail: uptime drops noticeably below that, or data goes missing after a crash/restart.	Members post comments and log their reading whenever they feel like it during the month, so if the app is down a lot or loses data, people will stop using it.
