

Book Club UML Component Diagram

Problem Statement 55 | Layered modular monolith | Proposed logical architecture

UML notation and interaction direction

- Circle = provided interface; semicircle = required interface; square = boundary port.
- Solid assemblies join consumer requirements to provider services. No arrowheads are needed.

Vote request: Web UI > Application API > Poll Service > Repository Gateway > Relational Database.

Commit outcome returns on the same interfaces; the API sends committed tally changes through SSE.

Database vote key: UNIQUE(member_id, poll_id). Failed or duplicate submissions leave the tally unchanged.
