

Requirements Baseline

Book Club Reading Challenge and Discussion Portal

Actors

- Club Member
- Discussion Lead
- System Administrator

Functional Requirements

ID	Description	Priority	Acceptance criteria
FR-001	The system shall hide spoiler-tagged discussion content until a club member explicitly reveals it or marks the relevant chapter as read.	High	Spoiler content remains masked in discussion previews and search results until an authorized reveal action occurs.
FR-002	The system shall allow a club member to create and edit a personal reading goal, measured in pages or chapters, for the current club book.	High	A valid goal persists across sessions and remains editable without removing recorded progress.
FR-003	The system shall allow a club member to record pages or chapters read and display progress as a percentage of the active goal.	Medium	A goal of 300 pages with 90 pages recorded displays 30 percent progress and persists after a new session begins.
FR-004	The system shall allow a discussion lead to create a monthly poll with at least two candidate books and a future deadline.	High	A valid poll becomes visible to members; missing deadlines and fewer than two candidates are rejected.
FR-005	The system shall allow each club member to cast no more than one vote in the same monthly poll.	High	A first valid vote is recorded. A later vote from the same account is rejected without changing any tally.

Non-Functional Requirements

ID	Category	Description	Priority	Acceptance criteria
NFR-001	Integrity and performance	Vote recording shall verify the authenticated member, enforce a unique member-and-poll record, and update the tally atomically.	High	Concurrent duplicate submissions produce one committed vote, and the result update meets the benchmark target defined for the test environment.
NFR-002	Availability and durability	The portal shall target 99 percent monthly availability and preserve confirmed reading logs and discussion comments across ordinary service restarts.	Medium	Monitoring demonstrates the availability target, and restart testing confirms that committed records remain intact.

Requirements Traceability Matrix

Traceability from requirement source through design and verification

Req.	Use case	Architecture	Verification	Test
FR-001	View Discussion; Reveal Spoiler	Discussion Service and Web UI	Confirm masking in threads, previews, and search until an authorized reveal.	TC-RE-01
FR-002	Set Reading Goal	Reading Challenge Service	Save, reload, and edit a valid goal across separate sessions.	TC-RE-02
FR-003	Log Reading Progress	Reading Challenge Service	Record known progress and verify percentage calculation and persistence.	TC-RE-03
FR-004	Create Monthly Poll	Monthly Poll Service	Accept a valid poll and reject invalid candidate counts or deadlines.	TC-RE-04
FR-005	Cast Vote; Verify Duplicate Vote	Monthly Poll Service and Database	Record the first vote, reject the next submission, and preserve every tally.	TC-RE-05
NFR-001	Verify Duplicate Vote; View Results	Authentication, Poll Service, Database	Verify the unique constraint, atomic recording, and benchmark latency.	TC-NFR-01
NFR-002	All persistent workflows	Services, Database, Monitoring, Backup	Restart the service, verify records, and review uptime monitoring.	TC-NFR-02

Traceability Notes

- FR-005 defines the voting behavior, while NFR-001 strengthens integrity and performance.
- Test identifiers provide stable links between requirements, implementation, and execution evidence.
- An approved requirement change requires corresponding updates to use cases, architecture, the SRS, and tests.

Requirement Relationships

- FR-001 maps to View Discussion Thread and Reveal Spoiler Content.
- FR-002 maps to Set Reading Goal.
- FR-003 maps to Log Reading Progress.
- FR-004 maps to Create Monthly Poll.
- FR-005 and NFR-001 map to Cast Vote and Verify Duplicate Vote.
- NFR-002 applies to every workflow that stores persistent information.
